

Reliable corona tests for your employees. Immediately and on your premises!

WHEN WORK CAN BE CONTAGIOUS

The most important tools for combating coronavirus include PCR and antigen tests. Rapid antigen tests provide reliable information on whether a person is infected in just 15 minutes and thus enable the chain of infection to be interrupted. If a rapid test is positive, we can carry out a PCR test directly afterwards. In such a case, we can use the same sample to carry out the validation by a PCR test.

All tests are carried out by medical staff.

Digital process from booking to the transmission of results.

We all long for more security and normality at the moment. Also, in the workplace. Because not everyone can work from home, not every work step can be digitised. Sometimes you simply have to be on site and exchange ideas with colleagues or customers – even in a confined space. However, there is often a feeling of uncertainty and unease. We support you in your duty of care and in giving your employees, customers and partners a better feeling of security. Rapid tests are a great way to briefly check everyone present and allow for relaxed, safe interaction.

CoviMedical offers you a full-service package with mobile test teams:

WHEN TIME-SAVING ON-SITE TESTING IS REQUIRED

Whether it is a conference, congress, corporate event or simply routine testing of your employees – our mobile, medically trained teams perform the Corona rapid test reliably and safely at your premises or at the nearest station.

To do this, participants register online in our registration form (in person or centrally via the HR department) and select an appropriate time slot for the test. This avoids longer waiting times and queues on site. In the booking process, the employee enters their personal data including their email address so that we can send them the appointment confirmation and later the reference to their retrievable test result. It only takes 15 minutes from the smear to the notification email!

More than 30 locations throughout Germany

The test result is available after just a few minutes.

All tests used by CoviMedical are listed with the German Federal Institute for Drugs and Medical Devices (BfArM); their sensitivity is 98.5 %. We have both the necessary experience and sufficient personnel and material to carry out up to 100,000 tests per week. If required, we can set up a test centre at your premises. For this purpose, we use double office containers that can be set up quickly and without bureaucracy.

Up to 100,000 tests per week possible

From 10 rapid tests, fixed time quota in one of our test centres

From 40 quick tests, our mobile test teams come directly to you

WHEN THE TEST RESULT COMES IN AUTOMATICALLY

Your employee registers for a Corona rapid test via a registration form with a time slot (e.g., 8:30 am). He receives the appointment confirmation by e-mail, which contains a QR code and is used as a mobile ticket.

On the testing day, the ticket is validated by scan at the reception. The scan triggers the printing of 2 labels.

Label 1 – for the employee:

contains a personalised QR code with a direct link to the test result. Alternatively, website name and code are printed to retrieve the result manually.

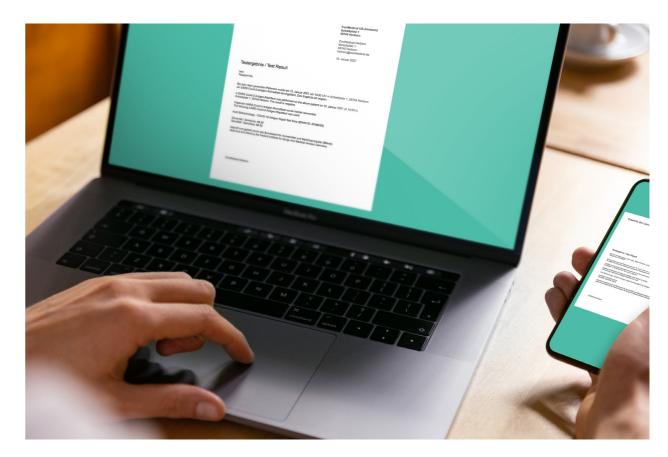

Label 2 – for the doctor/assistant:

is stuck onto the corona test. Contains a QR code with

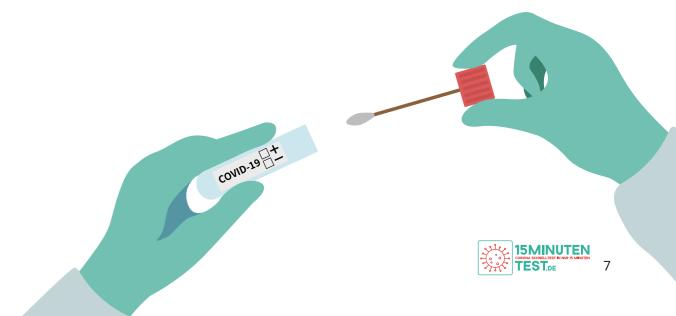

a direct link to the internal "Select result" page.

The employee is then asked to go to a test booth for a rapid test smear and the smear is taken.

As soon as the result is available, the doctor selects the positive, negative or neutral status on an internal "Select Result" page. He or she then triggers the "Send result mail to employee" process. The employee can check their status regularly via their QR code, but no longer than 24 hours after the result.

The test result can be accessed online on a mobile phone or PC.

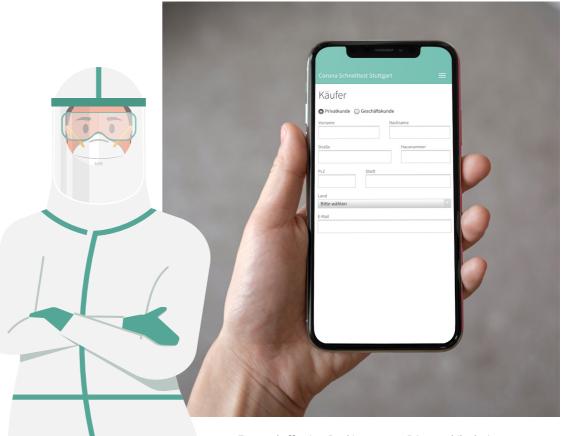

WHEN EVERYTHING IS WELL THOUGHT OUT AND PLANNED

The benefits of our system:

- User-friendly appointment scheduling
- Helpful information around the testing without blocking important capacities of health offices, crisis centres and medical practices
- Control of the number of visitors through precisely defined appointment time slots and quotas (e.g., every 5 to 10 minutes) in order to avoid queues and crowding as well as longer waiting times on site.
- Planning security for personnel expenditure and required test capacities
- If requested: Tracking possible within the test centre through check-in & check-out at established checkpoints
- Employee satisfaction through a high feeling of security

Fast and effective: Booking on your PC or mobile device.

WHEN DATA PROTECTION BECOMES MEDICAL CONFIDENTIALITY

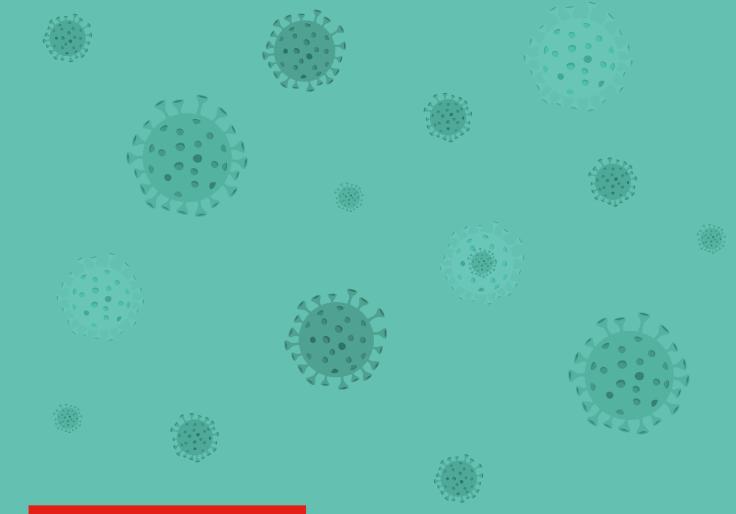

We are aware of the responsibility to protect special categories of data. CoviMedical processes personal data exclusively within the framework of the applicable legal provisions of the GDPR and the German Federal Data Protection Act.

In addition, the participant management software used within the test centre, in which the test results are also stored, is in line with the Technical Annex to the Notes and Recommendations on Medical Confidentiality, Data Protection and Data Processing in Medical Practices issued by the German Medical Association and the National Association of Statutory Health Insurance Physicians.

The participant management tool therefore runs separately from the ticketing software (appointment management). No ticket.io employee, but only doctors of the test centre, their authorised laboratory staff and the test person himself have access to the test result.

In principle, the following applies to all systems used by us: Data transmission takes place via the secure industry standard "SSL". All data is encrypted and stored exclusively on servers within the EU. Access is via 256-bit SSL encryption, and third parties do not gain access to data at any time.
